Professor – Mona Abou Taka

Submission Date – 17th Jan 2022

Description/Proposal

--The document is related to the software tool developed by the students of Fanshawe College as a part of, Capstone Project in the 4th semester of Business and Information Systems Architecture.

--This is the first draft report by the group. Newer versions and upgradations yet to be developed. The purpose of the project is to keep track of all the asset of an organization or an institution. Providing user friendly information in creating reports for Beyond Economic Repair, Asset Movement History and Insurance claim reports.

Product Scope

--The Scope of this software or the tool being built is to keep track of all the assets in the organization, this software helps the administrator or the staff building a report for the list of beyond economic report. It even helps to create a comprehensive movement report of all the asset in the company. Audit of the asset of the organization is a simple process.

Product Perspective

--This product is the first ever of this kind. It is being built from scratch and is not development of any existing tool or software. Any existence of a software of this kind is just a co-incidence.

--This software is best for any administrator for asset management for any campus or organization with small changes. The basic idea of this project is to create an environment where there's no need of any knowledge of excel for the user. It is a better option rather than maintaining a simple excel as the tool can help you by supplying a detailed report for shifting history of a single asset.
